Additional research: choose 3 additional research methods (see slide: choose a research method)

- 1) Interview with people who are experts in fields related to the project or community
- 2) Use of trusted and official online sources or paper documentaries
- 3) Analysis of geographical maps of the place

**Value for the community**: how will your research have an impact on your territory? Which effects and further developments could your research trigger? Which categories of people could it interest?

Our research is based on the sponsorship of the Waves for Water project and on raising awareness of the issues covered: environment, renewable energy and energy self-sufficiency.

In our opinion, our research could be useful to move bureaucratic blocks that have brought difficulties to the realization of the project and possibly to inspirate the execution of new projects concerning environmental and energy issues.

This Initiative aims to create a link with administrative bodies to implement the "Waves4water" project.
